

CIFP Ciudad Jardín LHII is an Integrated Vocational Training School with over 80 teachers and 600 students that provides vocational training in the fields of Administration and Management, Commerce and Marketing, Computer Science and Communication, and Training in Safe and Sustainable Mobility.

We also offer two specialisation courses: Artificial Intelligence and Big Data, Python Application Development, Cybersecurity in IT Environments and Search Engine Optimization and Social Media Communication.

We follow a modular system, allowing students to earn certificates at different levels of specialisation. These certificates range from intermediate to advanced level.

Most of our students are young/adult learners over 18 enrolled in advanced level courses.

Some students are enrolled in Dual Vocational Training. In this programme, students split their time between classroom instruction and practical training in companies, allowing them to gain hands-on experience while earning their qualification.
